

STATIC EARTHING REEL

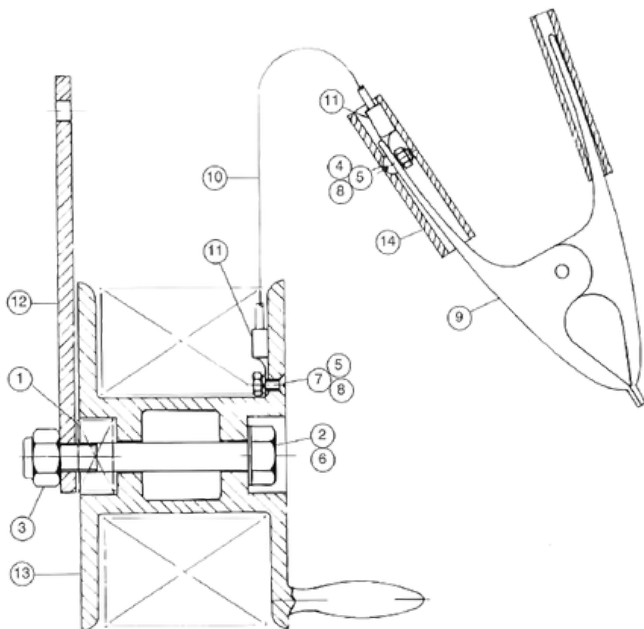

STATIC EARTHING REEL COMPLETE WITH BRACKET AND CLAMP

AVAILABLE IN 10M, 20M, 45M & 75M

The static earthing reel is designed to discharge static electricity build up in tankers, aircraft refuellers and wherever static charges are of concern and required by regulation to be fitted.

The static earthing reel is bolted to the equipment frame, making sure a good electrical connection is made (e.g. clean metal to metal contact). The cable is then withdrawn and clamped to a secure nominated grounding terminal at the point of delivery.

- **Body:** Aluminium
- **Bracket:** Steel
- **Cable:** PVC covered, stainless steel wire

Item	Description
